

2200W Bidirectional Power Supply with Single Output

# BIC-2200 series

Dimension			
L	*	W	* H
330	*	140	* 41 (1U) mm
13	*	5.5	* 1.61(1U) inch

## ■ Features

- Built-in active PFC function
- High efficiency up to 93%
- Forced air cooling by built-in DC fan
- Active current sharing up to 5 units
- Protections: Short circuit / Overload / Over voltage / Over temperature / Anti-Islanding / Under / Over frequency
- 5 years warranty

## ■ Applications

- Marine battery charger module
- Electric scooter or vehicle charger station
- Wastewater treatment system
- Electrolysis system
- Kinetic energy recovery system

## ■ Description

BIC-2200 series is a 2.2KW bidirectional power supply which is designed to control the power transferred from AC grid to DC side and DC side to AC grid for energy recycle. The implementation of a bidirectional power supply can allow for battery recharge from the grid, and battery energy recycle to the AC grid. With built-in functions such as active current sharing, remote ON/OFF control, and digital communication, BIC-2200 provides vast design flexibility for battery test equipment, charging station, laser system, and kinetic energy recovery system.

## ■ Model Encoding / Order Information

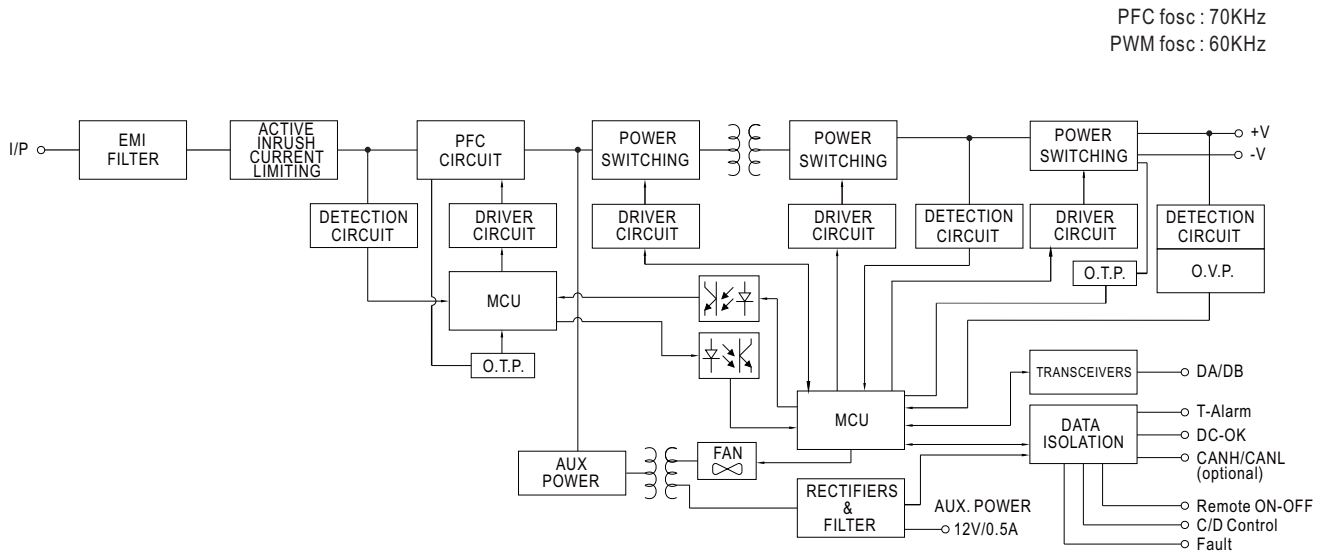

Type	Communication Protocol	Note
Blank	None protocol	In Stock
CAN	CANBus protocol	By request

**SPECIFICATION**

MODEL		BIC-2200-12	BIC-2200-24	BIC-2200-48	BIC-2200-96		
AC to DC Direction	OUTPUT	DC VOLTAGE	12V	24V	48V	96V

	DIMENSION	330*140*41mm (L*W*H)					
	PACKING	2.9Kg; 4pcs/12.6Kg/1.22CUFT					
NOTE	<p>1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.                  2. Ripple &amp; noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf &amp; 47uf parallel capacitor.                  3. Tolerance : includes set up tolerance, line regulation and load regulation.                  4. Need additional EMI filter to meet regulations of EMC conducted and radiated emission. Characteristics of EMI filter please refer to the table, Minimum Insertion Loss.                  5. The efficiency is measured at 75% load.                  6. The ambient temperature derating of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).                  7. Anti-islanding protection by Fault signal or Error flag by CANBus protocol. (CANBus model only)                  8. CANBus model only.                  9. During withstandards voltage and isolation resistance testing, the screw "A" shall be temporarily removed, and shall be installed back after the testing                  ※ Product Liability Disclaimer : For detailed information, please refer to <a href="https://www.meanwell.com/serviceDisclaimer.aspx">https://www.meanwell.com/serviceDisclaimer.aspx</a></p>

### AC Input Terminal(TB1) Pin NO. Assignment

Pin No.	Assignment	Terminal	Max mounting torque
1	AC/L	DECA T35-EO32-03	18Kgf-cm
2	AC/N		
3	FG $\perp$		

### DC Output Terminal Pin No. Assignment

Assignment	Diagram	Maximum mounting torque
+V, -V		10Kgf-cm

### LED Status Indicators

LED	Description
	Green AC to DC Direction, functions as regular power supply.
	Green DC to AC Direction, functions as grid inverter.
	Red Abnormal status (Over temperature protection, Overload protection, Fan fail.)

- Light
- Flash

### Mounting Instruction

Hole No.	Recommended Screw Size	MAX. Penetration Depth L	Recommended mounting torque
①	M4	4.5mm	7~10Kgf-cm

※Control Pin No. Assignment(CN46) : HRS DF11-10DP-2DS or equivalent

Mating Housing	HRS DF11-10DS or equivalent
Terminal	HRS DF11-10SC or equivalent

Pin No.	Function	Description
1	+12V-AUX	Auxiliary voltage output, 11.4~12.6V, referenced to GND-AUX (pin 2,4). The maximum output current is 0.5A. This output is not controlled by the Remote ON/OFF control.
2,4	GND-AUX	Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).
3	+5V-AUX	Auxiliary voltage output, 4.5~5.5V, referenced to GND-AUX (pin 2,4) only for Remote ON/OFF used. This output is not controlled by the Remote ON/OFF control.
5	Remote ON-OFF	The unit can turn the output ON/OFF by electrical signal or dry contact between Remote ON/OFF and +5V-AUX(pin 3). (Note.1)
6	C/D Control	High (4.5 ~ 5.5V) : Battery Charging mode Low (-0.5 ~ 0.5V) : Battery Discharging mode (Note.1)
7	DC-OK	High (4.5 ~ 5.5V) : When the $V_{out} \leq 80\% \pm 5\%$ . Low (-0.5 ~ 0.5V) : When $V_{out} \geq 80\% \pm 5\%$ . The maximum sourcing current is 4mA and only for output. (Note.1)
8	Fault	High (4.5 ~ 5.5V) : When the $V_{ac} \leq 80\% \pm 5\%$ , OLP, SCP,OTP,OVP,AC Fail,fan lock, islanding protection. Low (-0.5 ~ 0.5V) : When $V_{ac} \geq 80\% \pm 5\%$ and when power supply work normally. The maximum sourcing current is 4mA and only for output. (Note.1)
9	T-ALARM	High (4.5 ~ 5.5V) : When the internal temperature exceeds the limit of temperature alarm, or when any of the fans fails. Low (-0.5 ~ 0.5V) : When the internal temperature is normal, and when fans work normally. The maximum sourcing current is 4mA and only for output(Note.1)
10	NC	-----

Note 1 : Isolated signal, referenced to GND-AUX(S).

※Control Pin No. Assignment(CN47): HRS DF11-10DP-2DS or equivalent

Mating Housing	HRS DF11-10DS or equivalent
Terminal	HRS DF11-10SC or equivalent

Pin No.	Function	Description
1,2	DA	Differential digital signal for parallel control. (Note.1)
3,4	DB	
5,6	GND	Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).
7	CANH (optional)	For CANBus model: Data line used in CANBus interface. (Note.2)
8	CANL (optional)	For CANBus model: Data line used in CANBus interface. (Note.2)
9,10	GND-AUX	Auxiliary voltage output GND. The signal return is isolated from the output terminals (+V & -V).

Note 1 : Non-isolated signal, referenced to [-V (signal)]

Note 2 : Isolated signal, referenced to GND-AUX(S).

※DIP Switch Position Assignment(DIP-SW50): Please refer to the Function Manual.

Assignment	Diagram
DA, DB Signal and parallel control function (1)Non-parallel operation (a) set the DIP switch of position OFF. (2)Parallel operation (a) set the DIP switch of position ON . (b) PSUs are configured in parallel operation.	

### ◎ Bidirection process

BIC-2200 possess forward (AC to DC) output and reverse (DC to AC) output conversion function. Users are able to select different modes of BIC-2200 according to requirement. Before entering detailed function explanation, please refer to following definitions. And refer to the table below for operation modes of BIC-2200.

#### Forward conversion (AC to DC):

The power is provided from AC grid to load through BIC-2200, it transfers AC energy into DC power. In this mode, BIC-2200 acts similar to battery charger.

#### Reverse conversion (DC to AC):

In reverse mode, it works oppositely to the forward conversion. The power is provided from either the battery or DC source to the AC grid. Output range of AC is from 180Vac~264Vac and 47Hz~63Hz. As long as the AC grid is within the range, BIC-2200 can work under smoothly.

#### Forward/Reverse auto transform mode (default):

This is default factory setting, BIC-2200 operates as table below

Condition	Mode
Set voltage > load voltage	AC to DC
Set voltage < load voltage	DC to AC

#### Programmable battery charge/discharge mode:

This mode only can be activated by CAN bus with optional model and operation behavior is as below.

Condition	Mode
C/D = 1	AC to DC
C/D = 0	DC to AC

### ◎ Current Sharing

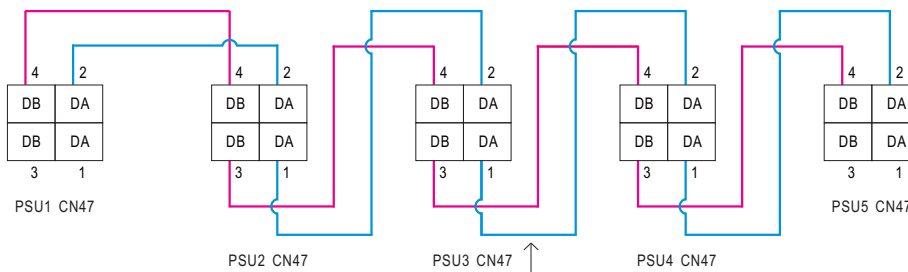

BIC-2200 has the built-in active current sharing function and can be connected in parallel, up to 5 units, to provide higher output power as exhibited below :

- ※ The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
- ※ In parallel connection, power supply with the highest output Voltage will be the master unit and its Vout will be the DC bus voltage.
- ※ The total output current must not exceed the value determined by the following equation:  

$$\text{Maximum output current at parallel operation} = (\text{Rated current per unit}) \times (\text{Number of unit}) \times 0.95$$
- ※ When the total output current is less than 5% of the total rated current, or say  $(5\% \text{ of Rated current per unit}) \times (\text{Number of unit})$  the current shared among units may not be balanced.
- ※ Under parallel operation ripple of the output voltage may be higher than the SPEC at light load condition. It will go back to normal ripple level once the output load is more than 5%.
- ※ CN47/SW50 Function pin connection

Parallel	PSU1		PSU2		PSU3		PSU4		PSU5	
	CN47	SW50	CN47	SW50	CN47	SW50	CN47	SW50	CN47	SW50
1 unit	X	ON	—	—	—	—	—	—	—	—
2 unit	V	ON	V	ON	—	—	—	—	—	—
3 unit	V	ON	V	OFF	V	ON	—	—	—	—
4 unit	V	ON	V	OFF	V	OFF	V	ON	—	—
5 unit	V	ON	V	OFF	V	OFF	V	OFF	V	ON

(V : CN47 connected ; X : CN47 not connected)

If the lines of CN47 are too long, they should be twisted in pairs to avoid the noise.

◎ DA, DB connected mutually in parallel.

## GUIDANCE OF ADDITIONAL FILTER
